

JAMES DELOS REYES

Full-Stack Engineer | TypeScript · React · NestJS · Node.js | AI Integration (OpenAI, RAG) | 8 yrs

Cebu, Philippines · sabakhadhaoy@gmail.com · +63 961 641 0822 · linkedin.com/in/jamesakvich · github.com/jameskavich96

SUMMARY

Full-stack engineer with 8 years across React/TypeScript frontends and Node.js backends, currently building an AI-powered recruitment platform. I ship AI inside products — OpenAI chat support and an embeddings + Qdrant vector-search matching pipeline running in production — and own features end-to-end, from first wireframe through API integration to production.

EXPERIENCE

Full Stack Developer — Jobvious

Apr 2025 – Present

AI-powered recruitment and referral platform — TypeScript workspace of 11 services: React SPAs (Vite), NestJS APIs, MySQL/Prisma, Redis, Socket.io, OpenAI matching with Qdrant vector search.

- Designed and built the full redesign of the admin platform: a 9-module React + TypeScript SPA (Tailwind, Radix UI, TanStack Query, Zustand) on a custom design system with hand-coded SVG data visualizations.
- Built AI chat support on OpenAI for profile completion, job-matching queries, and referral guidance — cutting manual support work for the operations team.
- Shipped participant-facing onboarding, resume upload, and referral workflows as mobile-first UI, plus real-time messaging and notifications over Socket.io.

Senior Software Engineer — Accenture

Aug 2022 – Apr 2025

- Worked on Appwards, Philip Morris International's nationwide retailer loyalty platform (ph.pmiandu.com): retailers redeem pack promo codes for points — mobile-responsive React against Node.js services.
- Built an internal file-storage platform used by Accenture teams globally (Mexico, PH, UK, Ireland).
- Cut deployment time ~30% via CI/CD pipelines (Jenkins, Docker, AWS); improved load times ~25% through profiling and bottleneck resolution.

Back End Developer — GoTeam

Jun 2021 – Aug 2022

- Built the road-vision backend for Black Moth (intelligent machine vision systems for mining and road infrastructure): vehicle-mounted units detect road defects, captures stored route-tied in AWS S3 and served through backend APIs into the web application, where operators track defect growth across passes.
- Resolved performance issues across Node.js/Express services, improving API response times ~20%; wrote unit and integration tests as standard delivery.

Software Engineer — Tech Mahindra

Mar 2020 – Jun 2021

- Built a C#/.NET application that semi-automates CSR agents' repetitive daily tasks into a single click — improving task efficiency ~40%.
- Automated email extraction (saving 10+ hours weekly) and built a React app that replaced the recruitment team's manual workflows.

Software Engineer — M Lhuillier Financial Services

Jun 2018 – Mar 2020

- Migrated the nationwide pawn-system teller tools from a C# desktop app to a React web application, and rewrote its C# APIs in Node.js for performance and scalability.
- The web migration retired the branch-local server + sync-tool layer — one central system replaced per-branch replication across branches all over the Philippines.

TECHNICAL SKILLS

Core: TypeScript, JavaScript, React, Node.js, HTML/CSS, Tailwind CSS, Radix UI, TanStack Query, Zustand, REST APIs, MySQL, PostgreSQL, Git

Working knowledge: NestJS, Prisma, Socket.io, OpenAI API, C#/.NET, Docker, GitHub Actions, Vitest, Testing Library, MongoDB, Capacitor, AWS S3

Familiar: Redis, BullMQ, Qdrant (vector search), RAG pipelines, Playwright, Strapi

EDUCATION

BSc Information Technology — Cebu Eastern College 2014 – 2018

LANGUAGES

English (professional working proficiency) · Filipino/Cebuano (native)
